SUMMARY

Final-year Computer Science student specializing in **Applied Artificial Intelligence and Retrieval-Augmented Generation (RAG) systems**. Hands-on experience building **production-ready AI chatbots** and end-to-end AI pipelines, from data processing and retrieval optimization to **LLM integration and scalable deployment** using FastAPI, Docker, and vector databases. Strong research-oriented mindset with practical implementation aligned to real-world AI applications.

EXPERIENCE

AI Engineer Intern

KIAISOFT company **June 2025 - October 2025, Dich Vong, Cau Giay, Ha Noi**

Kiaisoft is a software development company that offers smartphone apps, blockchain, AI, and web development services.

- Designed and developed an **AI-powered legal chatbot** using **Retrieval-Augmented Generation (RAG)** to answer domain-specific legal questions.
- Gained hands-on experience in **AI system design**, data flow orchestration, and AI application life cycle in a real company environment.

PROJECT

RAG architectures research

github.com/Hieu1607/RAG_best_practices

- Researched and implemented state-of-the-art RAG architectures based on best practices from COLING 2025 publications.
- Built an end-to-end RAG pipeline including Query Expansion, Document Retrieval, and LLM-based Answer Generation.
- Optimized document indexing through chunking strategies, keywords expansion, and contrastive learning for large knowledge bases.

AI legal chatbot assistant

KIAISOFT company • github.com/Hieu1607/AI_legal_assistant

- Developed an enterprise-oriented AI legal assistant capable of semantic search and intelligent question answering over legal documents.
- Engineered a microservices-based backend using FastAPI and Docker, integrated with Weaviate vector database for scalable semantic retrieval.
- Added health check endpoints, Prometheus metrics, and API documentation, enabling production-grade observability and monitoring.

Stock Data Analyst

github.com/Hieu1607/Stock-Data-analysist

- Built machine learning models to **analyze and predict stock market trends** from historical data.
- Collected data via web scraping and performed **data cleaning, missing value handling, and feature engineering**.
- Conducted model training, validation, and evaluation using appropriate metrics to assess predictive performance. Visualized data patterns and model results to support analytical insights and decision-making.

EDUCATION

Bachelor of Computer Science

Hanoi University of Science and Technology (HUST) • No 01 , Dai Co Viet Street , Hai Ba Trung District , Ha Noi City

- GPA : 3.24
- Related Subject : Artificial Intelligence , Deep Learning , Machine Learning and Data mining
- Expected graduation year : 2026

SKILLS

AI & Machine Learning: Machine Learning, Deep Learning, RAG , Embeddings, Semantic Search
Programming & Frameworks: Python, PyTorch, TensorFlow, scikit-learn
Backend & MLOps: FastAPI, REST APIs, Docker, Vector Databases
Data & Tools: Data preprocessing, Feature engineering, Model evaluation, Git, Jupyter
Language: English – TOEIC 935
